

Appendix

A Selection of Kepler's Handwritten Charts¹

Notes on Viewing the Charts

Kepler most often drew his charts in sets of six on one page. We give a sample of a page here, with numbers showing the order in which the charts are described in the figures. Sometime there are only two charts per page, and these are described from top to bottom. Each figure includes its Pulkovo volume number, folio number, and *recto* or *verso*. All but Figure 1 have corresponding pages of transcriptions in *GW* 21, 2.2, and these are also listed with each figure.

In addition to the Austrian royal family and charts already supplied with the translations, within these pages are included notable figures such as Martin Crusius, Tycho Brahe, Pope Paul IV, Andreas Vesalius, Caspar Creuziger, H. Eobanus Hessus, Caspar Peucer and Johannes Schoener.

¹ We thank Dr Irina V. Tunkina, Director of the Kepler Archive in St Petersburg, for permission to publish these folios. We also thank Karine Dilanyan for researching the folios and obtaining the scans from the Archive.
